FEEDING TO WIN: JUMPING

WHEN THE RESULT COUNTS

Alltech

CAVALOR®

START HERE

1

2 Need more calories to sustain current workload than just forage can provide?

NO

YES

For a jumper?
You're kidding, right?

3 What's your horse's natural temperament in work?

NO

TOO HOT

4 The nervous, stressed-out type?

YEP, HOW'D YOU KNOW? LOL

YOUNG OR SPOOKY HORSES, AND STALLIONS

HOT, CONSTANTLY STRESSED HORSES

FOR COMPETITIONS OR STRESSFUL EVENTS

NOW WHAT?

5 Worried about joints?

WHO ISN'T?

HIGH PERFORMANCE FUNCTION

FEEL BETTER NOW

6 Travel much?

OH, THE PLACES YOU'LL GO!

SUPPORT IMMUNITY

NOW GO WIN

Nothing beats this power duo for a maximum boost.

FINISH HERE

AH...VACATION!

Maximize the winning effects of downtime.

WANT MORE DETAILS? WE THOUGHT YOU MIGHT.

1. **FORAGE** Every horse has the same basic need to keep intestines moving with a constant source of roughage such as hay or grass. These fibers promote healthy microflora in the large intestine, and keep the overall intestinal health of the horse on track. Feed high quality hay in multiple small meals a day (slow feeders if you can do those) to replicate free foraging as much as possible. Skimping on hay is the fastest way to build problems and ultimately waste money.

2. **ADD CALORIES** Jumping requires mainly anaerobic energy: the energy conversion takes place without the aid of oxygen. For this, horses need sources of quickly absorbable energy such as processed cereal grains. Cavalor feeds use puffed cereals for unparalleled absorption of starch and sugar in the small intestine, which increases feed efficiency (feed less) and helps keep the digestion operating as nature intended and significantly reduces the risk of issues. The impact of puffing the cereals, versus whole or crimped, cannot be overestimated in how it positively affects both digestion (for health) and absorption (maximum fuel for performance).

3. **FEED** Cavalor has four feeds to suggest for the competitive jumper, fine-tuned for the sport and for individual genetic types and personalities. Even better, without a crossover period, you can use these feeds interchangeably, such as feeding Performix normally, and either switching to or adding Superforce on just competition days. This is because in all Cavalor feeds similar ingredients in different proportions are used.

4. **DE-STRESS** Avoid rich grain concentrates and provide energy in the form of fiber and fat to help keep stress in check. Next, to stay within competition rules, you can turn to a variety of herbs to calm the stressful horse. With extensive testing, we've discovered the source of the stress or anxiety, as well as the individuality of the horse and the combination of herbs to use, and which you don't. So, we've exact guidelines with one feed and three calming supplements, from these you will find the exact best starter and dose for your horse with trial and error.

5. **JOINTS** Reduce/remove pain to improve performance with Cavalor FreeBute + give joints what they need to maintain health with Cavalor Arti Matrix. Cavalor has performed extensive research into the impact of inflammation on the joints and the reaction in the joint after inflammatory stimuli. From this research, we've identified different herbs and nutrients that work most efficiently in order to prevent pain and inflammation in the joints.

6. **IMMUNITY** Our research indicates most show horses with no outward sign of illness have compromised profiles due to travel and show stress, leaving them at risk for illness, and impacting (however subtly) their show performance. Gut health is the basis for a good immune system, and Cavalor is relentlessly focused on providing feeds that support it for every performance profile. With Cavalor feed as your base, we then recommend Cavalor Emergency 911 microflora, hydration-promoting Cavalor Mash & Mix, and Cavalor Resist + VitC ahead of a long journey or during competition season. It's been proven in field use that horses suffer less from skin irritations when they are on Cavalor Resist + VitC.

7. **NOW GO WIN** Two days before a competition, start using the Cavalor secret one-two punch to go out and win. Hard workers are always a little stiff or sore, and Cavalor FreeBute gives them the relief they need to feel great and give it their all. Cavalor Muscle Fit has a similar effect, this time on the muscles, by reducing lactic acid buildup, and even more importantly, by stimulating its breakdown. This eases stiffness and promotes maximum muscle activity and ability for the edge you need to win.

8. **AH...VACATION!** It's important to remember that horses being let down from work also need to be let down from their performance feed. Feed as you need! Leverage letdowns into high performance and success with Cavalor FiberForce, and Cavalor Hepato Liq to detox.
