We couldn't agree more. Now, let this guide be the cause of your greatest success.

HIPPOCRATES

“ LET THY FOOD BE THE MEDICINE ”

**FEEDING TO WIN:
DRESSUUR**

WHEN THE RESULT COUNTS

CAVALOR®

START HERE

1

2 Need more calories to sustain current workload than just forage can provide?

NO

YES

For a dressage horse? You're kidding, right?

NO

3 What's your horse's natural temperament in work?

TOO HOT

4 The nervous, stressed-out type?

YEP, HOW'D YOU KNOW? LOL

YOUNG OR SPOOKY HORSES, AND STALLIONS

HOT, CONSTANTLY STRESSED HORSES

FOR COMPETITIONS OR STRESSFUL EVENTS

NEEDS MORE ENDURANCE

JUST RIGHT

NOW WHAT?

5 Worried about joints?

WHO ISN'T?

FEEL BETTER NOW

6 Travel much?

OH, THE PLACES YOU'LL GO!

SUPPORT IMMUNITY

NOW GO WIN

Nothing beats this power duo for a maximum boost

FINISH HERE

AH... VACATION!

Maximize the winning effects of downtime.

WANT MORE DETAILS? WE THOUGHT YOU MIGHT.

1. **FORAGE** Every horse has the same basic need to keep intestines moving with a constant source of roughage such as hay or grass. These fibers promote healthy microflora in the large intestine, and keep the overall intestinal health of the horse on track. Feed high quality hay in multiple small meals a day (slow feeders if you can do those) to replicate free foraging as much as possible. Skimping on hay is the fastest way to create problems and ultimately waste money.

2. **ADD CALORIES** Dressage requires aerobic energy; the energy conversion takes place with the aid of oxygen. For this, horses need slow-release energy sources such as fat (oils) and fiber (hay, soaked beet pulp). For oils, the type you feed is critical to ensure stability and a proper level of omega-3 and other essential fatty acids. The impact of Cavalor puffing the cereals, rather than whole or crimped processing, cannot be overestimated in how it positively affects both digestion (for health) and absorption (maximum fuel for performance).

3. **FEED** Cavalor has four feeds to suggest for the competitive dressage horse, fine-tuned for individual genetic types and personalities. Use interchangeably, without a crossover period, such as feeding Cavalor FiberForce and Endurix in varying ratios that give you more energy when you need it. If Endurix doesn't provide enough energy, switch to Cavalor Performix or Cavalor Superforce at the show and/or supplement with Cavalor OilMega.

4. **DE-STRESS** Fortunately the best energy sources for dressage (fiber and fat) are also the most calming. Cavalor has designed Pianissimo feed specifically for stressful, spooky horses, with no oats, low protein, and soothing herbs built in. Stressed horses will make the biggest change with both Pianissimo and one or more of our herbal calming supplements, all within competition rules. With extensive testing, we've discovered the herbal calming of the horse, the within the competition rules. With extensive testing, herbs work. We've given starter guidelines with our calming supplements, from these you will find the exact best solution for your horse with trial and error.

5. **JOINTS/TENDONS/MUSCLES** Dressage horses are known for joint stress, back pain and muscle soreness. Reduce muscle acidification with a forage-first mantra. Then greatly reduce or eliminate pain with Cavalor FreeBute, and give high-performance joints what they need with Cavalor Arti Matrix. Our extensive research identified different herbs and nutrients that work together to prevent pain and inflammation, stimulate the body's immunity against auto-immune reactions, and improve joint nutrient supply to help restore synovial fluid.

6. **IMMUNITY** Our research indicates most show horses with no outward sign of illness have compromised blood profiles due to travel and show stress, leaving them at risk for illness, and impacting their show performance. Gut health is the basis for a good immune system, and Cavalor is relentlessly focused on providing feeds that support it for every performance profile. With Cavalor feed as your base, we then recommend Cavalor products Emergency 911 microflora, hydration-promoting Mash & Mix, and Resist + VitC ahead of a long journey or during competition season. It's been proven in field use that horses suffer less from skin irritations when they are on Resist + VitC.

7. **NOW GO WIN** Two days before a competition, start using the Cavalor secret one-two punch to go out and win. Hard workers are always a little stiff or sore, and Cavalor FreeBute gives them the relief they need to feel great and give it their all. Cavalor Muscle Fit has a similar effect, this time on the muscles, by reducing lactic acid buildup, and even more importantly, by stimulating its breakdown. This eases stiffness, promotes suppleness, and maximizes muscle activity and ability for the edge you need to win.

8. **AH...VACATION!** Horses being let down from work also need to be let down from their performance feed. Feed as you need! Leverage layups and letdowns into future high performance and success with Cavalor FiberForce feed, and Cavalor Hepato Liq to detox.
